SUPPLEMENTARY INFORMATION:

I. Background

Section 101(a), 30 U.S.C. 811(a), allows MSHA to promulgate standards that would require operators to make and retain records from which MSHA would then be allowed to collect information. Section 103(h), 30 U.S.C. 813(h), of the Federal Mine Safety and Health Act of 1977 (Mine Act), 30 U.S.C. 801 et seq., authorizes MSHA to collect information necessary to carry out its duty in protecting the safety and health of miners.

Title 30 CFR 56.5005 and 57.5005 require, whenever respiratory equipment is used, that metal and nonmetal mine operators institute a respirator program governing selection, maintenance, training, fitting, supervision, cleaning, and use of respirators. These standards seek to control miner exposure to harmful airborne contaminants by using engineering controls to prevent contamination and vent or dilute the contaminated air. However, where accepted engineering control measures have not been developed or when necessary by the nature of work involved (for example, while establishing controls or occasional entry into hazardous atmospheres to perform maintenance or investigation), employees may work for reasonable periods of time in concentrations of airborne contaminants exceeding permissible levels if they are protected by appropriate respiratory protective equipment.

Sections 56.5005 and 57.5005 incorporate by reference, requirements of the American National Standards Institute's Practices for Respiratory Protection (ANSI Z88.2-1969). These incorporated requirements mandate that miners who must wear respirators be fit-tested to the respirators that they will use. Certain records are also required to be kept in connection with respirators, including: written standard operating procedures governing the selection and use of respirators; records of the date of issuance of the respirator; and fit-test results.
